A highly specified
Civil Drainage Range

Gatic Civil Drainage, part of Alumasc Water Management Solution, is a global leader of engineered surface water drainage and access covers.

Established since 1928, Gatic's highly specified civil drainage range is well recognised for innovation, quality and performance across many prestigious projects in the construction, transport and utility markets.

We offer the widest range of slot and channel drains, the fastest technical response and the most extensive support.

FILCOTEN®

Filcoten is an innovative, lightweight concrete channel drainage system that sets new standards in strength, installed performance and environmental compatibility.

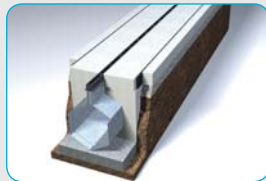

- High Performance Concrete (HPC) that is 70% lighter than conventional concrete - cheaper to transport and quicker to install
- Unique combination of high load bearing strength (80-90 N/mm sq) AND double flexural strength of conventional HPC - improved impact stability, few breakages, easier to transport, handle and stock

- Temperature, frost and UV-resistant for trouble-free operational life - more robust, doesn't crack or separate from its concrete surround and resists water penetration
- Chemical-free manufacture and 100% recyclable - ONLY product to be entirely made using renewable energy
- Non-flammable - doesn't have a fire load

Products include:

- **Slotrain**
the most specified slot drain system
- **FILCOTEN®**
the world's first lightweight concrete channel drain
- **ProSlot**
discreet, high intake capacity, low maintenance
- **SML**
Harmer SML below ground drainage cast iron pipes and fittings

SELF Channel	Load Class A15 - B125	NEW Filcoten Pave now available 	Grate widths 100mm Stocked		Filcoten Pave
TEC Channel	Load Class C250 - D400		Grate widths 100mm Stocked		
ProSlot	Load Class D400		Grate widths 100mm Stocked		
PRO Channel	Load Class C250 - F900		Grate widths (larger grate sizes) 100mm - 300mm Specification
